

# sphinxcontrib.openapi

## Pros & Cons

## pros

- UI is as same as RST-rendered content
- More readable content for small API descriptions

```
GET /services
```

Services

Example request:

```
GET /services HTTP/1.1  
Host: example.com
```

# cons

## 1. Version dependent

```
basepython == python3.8
```

```
# Version 3.8 is required, otherwise  
AttributeError will arise
```

```
sphinxcontrib-openapi == 0.6.0
```

```
# Version 0.6.0 is required, otherwise  
BlockGrammar error will arise
```

# cons

2. Extra work required to generate example values

```
},  
"example": [  
  {  
    "name": "DroneIdentifier",  
    "version": "1.0.0",  
    "display_name": "Drone Identifier",  
    "description": "Detects if a UE is a drone",  
    "registrationDate": "2020-11-03"  
  }  
]
```
